Firm Overview

Summit Global Investments, LLC (SGI) is an SEC registered investment adviser founded in 2010 by executives within the investment management space. SGI is headquartered in the Salt Lake City, Utah, area. SGI specializes in low volatility investment strategies.

Investment Objective and Strategy

The Fund seeks to outperform the S&P 500 Index® over a market cycle while reducing overall volatility. The Fund normally invests at least 80% of its net assets in equity securities, primarily common stocks, of companies within the Russell 1000 Index® and S&P 500 Index®. Its investments will generally consist of securities, which may include common stocks, preferred stocks, warrants to acquire common stock, and securities convertible into common stock. The Fund's investment adviser attempts to lower the Fund's market risk by investing in U.S. equity securities that lower the overall volatility of the Fund's portfolio as compared to the S&P 500 Index®.

*The performance data quoted represents past performance. Past performance does not guarantee future results. Investment return and principal value will fluctuate so that shares, when redeemed, may be worth more or less than the performance shown. Current performance may be lower or higher than that shown here. The total annual operating expense ratio, as stated in the current prospectus, is 1.14% for SILVX, 1.39% for LVOLX and 2.14% for SGICX. The actual expense ratio is lower due to an expense limitation agreement by the Fund's investment adviser. Performance would have been lower without fee waivers in effect. Quarter-end LVOLX returns reflect a deduction of the maximum front-end sales charge of 5.25%. The fund imposes a 1.50% redemption and exchange fee on shares held less than 60 days. Performance data does not reflect the redemption or exchange fee; if it had, return would be reduced. Performance is total return and is annualized for periods greater than one year. For performance current to the most recent month-end, please call (855)-744-8500. Funds sold by prospectus only.

The S&P 500 Index® is a broad-based, unmanaged index of 500 stocks, which is widely recognized as representative of the equity market in general. The Russell 1000 Index® measures the performance of the 1,000 largest companies in the Russell 3000 Index®, which represents approximately 92% of the total market capitalization of the Russell 3000 Index®. One cannot invest directly in an index.

Investment Considerations

Equity securities (stocks) are subject to market, economic, and business risks that will cause their price to rise or fall over time. The net asset value per share of the Fund will fluctuate as the value of the securities in the portfolio change and an investor may lose money. Although the Fund seeks lower volatility, there is no guarantee the Fund will perform as expected. Fund holdings and sector allocations are subject to change and are not recommendations to buy or sell any security.

Investment Terms

- Beta:** Beta attempts to measure relative risk. A Beta rating above 1.0 indicates greater volatility than the market. A Beta rating below 1.0 indicates lower volatility than the market.
- Standard Deviation:** A statistical measurement showing how widely returns varied over a certain period of time. For the characteristics, the period is twelve months. For the chart the period is since inception. When a fund has a high standard deviation, the predicted range of performance implies greater volatility.
- Market Capitalization:** The measurement of the total dollar market value of all of a company's outstanding shares.
- Price/Earnings:** An equity valuation measure defined as market price per share divided by annual earnings per share.
- Price/Cash Flow:** A measure of the market's expectations of a firm's future financial health. Because this measure deals with cash flows, the effects of depreciation and other non-cash factors are removed.
- Price/Book:** A ratio used to compare a stock market value to its book value. It is calculated by dividing the current closing price by the latest quarter's book value per share.
- Price/Sales:** A valuation metric for equities. It is calculated by dividing the company's market cap by the revenue in the most recent year; or, equivalently, divide the per-share stock price by the per-share revenue.
- Return on Equity:** The amount of net income returned as a percentage of shareholders' equity. Return on equity measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested.
Return on Equity = Net Income/Shareholders' Equity
